Regent Street Update – 16 Oct 2020

We have received the following information today.

On **Tuesday 27th October between 8 am and 5:30pm** a company called Applied Geology will be undertaking surveys on the land at the back of Regent Street. This will include trial pits, these will be backfilled in layers (in the order they were excavated) and compacted upon completion with the excavator bucket. There may be a slight excess of material protruding above the surface, however, this will allow for subsequent settlement to the previous level excavated)

Window sampling boreholes will be drilled, 3 with standpipes for gas/groundwater monitoring - these will be finished with stopcock flush covers. The remaining boreholes will be backfilled with their arisings and compacted upon completion.

Moulton Parish Council will update if we receive any changes.
